

# Effect of adding deadwood disturbance on per-site RMSE

Paired violin: cyan = without D | pink = with D | LOSO CV | 65 sites | % = MEDIAN PAIRED change in per-site RMSE (negative = less error, green)  
stars = one-sided paired Wilcoxon, H1: adding D reduces RMSE, BH-FDR within figure (\*\* $q < 0.001$ , \*\* $q < 0.01$ , \* $q < 0.05$ , ns) | %... = share of sites whose RMSE improved  
y axis zoomed to the 95th percentile – no data removed; M1–M4 have no memory term and appear once, under Anomaly
